

Fluvial landscapes –from natural systems to cultural landscapes and their future potential

Tuesday 5 March 2024 14:15 (2 hours)

The session is intended to discuss potential natural and anthropogenic events which occurred during the Holocene until today in the Central European Elbe catchment. We would like to discuss and determine (geo)chemical, biological, sedimentological and mineralogical indicators which may be applicable to trace such events, changes and breakpoints in fluvial archives.

Presenters: SIEBERT, Christian (UFZ); SACHSE, Dirk (GFZ)

Session Classification: Breakout Sessions
