Dimensional perspectives on multiscale cortical organization

Wednesday 11 September 2024 10:30 (30 minutes)

The talk will overview conceptual and methodological advances to study spatial patterns in macroscale cortical organization. It will also present how open neuroinformatics approaches can be used to seamlessly integrate post-mortem information with high- and ultrahigh field neuroimaging datasets for targeted structure-function studies in the human brain.

Presenter: BERNHARDT, Boris (McGill University)
