le: Incubator Information & Data Science: Five Platforms and Beyond

Wednesday 13 November 2024 15:30 (1h 30m)

In 2016 the Helmholtz Incubator Information & Data Science was established in order to strengthen Information and Data Science as a whole for Helmholtz. From this initiative five priority fields and later in 2019 five platforms with overarching topics and services were established: federated IT services (HIFIS), artificial intelligence (AI), standardization of metadata and data structures (HMC), imaging (HI) and education (HIDA). These platforms are located at different Helmholtz centers and are available for the whole Helmholtz association. This session will present these platforms and the recent activities of the incubator beyond the platforms, focusing on the resulting opportunities for AWI researchers and staff.

Presenter: KLEINHANS, David

Session Classification: Breakout Sessions
