

First steps with Python (Part 2)

Tuesday, September 17, 2024 10:00 AM (6 hours)

On Day 2 of this course, you will deal with the following aspects:

- **Functions:** Splitting parts of programs off into self contained, reusable blocks is a good way to handle complexity and allow for parts of a program to also be used in other projects.
- **For - Loops:** Introducing the second kind of loop, the “for”-loop is well suited to iterate over a set of data or repeat a set of instructions a given amount of times.

Presenter: ERXLEBEN, Fredo (Helmholtz-Zentrum Dresden-Rossendorf)

Session Classification: Course 13 (HIFIS)
