

HELPMI: the Helmholtz Laser-Plasma Metadata Initiative

Start developing a data standard for the global LPA community

Lasers...

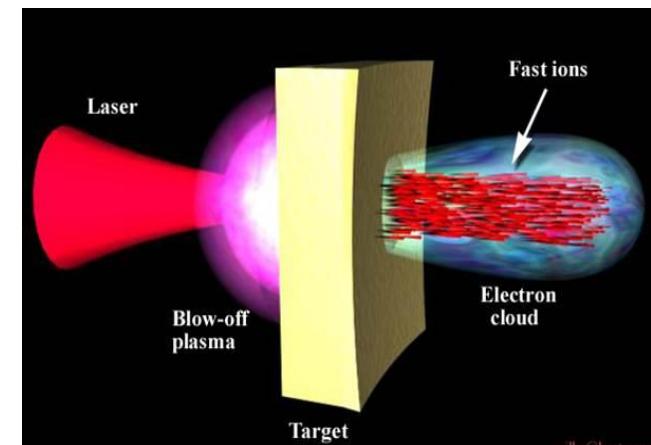

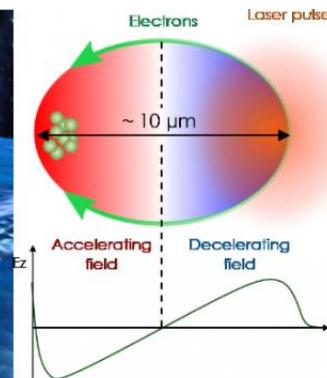

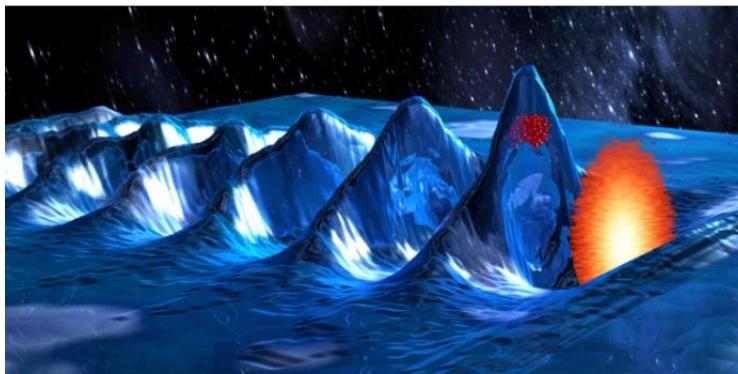

- Ultra-intense lasers can transform plasmas into particle-accelerating structures
 - Ultra-short (fs-ps), Joule-kJ laser facilities: high peak-power, [ICUIL.org](https://www.icuil.org)
 - Chirped pulse amplification (invented 1985, Nobel prize awarded 2018)

<https://www.icuil.org/activities/laser-labs.html>, Interactive map

Schwoerer H. (2008). Particle acceleration with lasers. *S. Afr. J. Sci.* **104**, 299–304.

- Ultra-intense lasers can transform plasmas into μm -scale particle-accelerating structures
 - Electron acceleration and ion acceleration in high gradients
 - Inherent ultra-short time structure and thus high peak currents

HELPMI: Main Goals

2023-2025, GSI+HIJ+HZDR

- Initiative: **start** the development of a data standard for LPA experiments
 - Consulting and assistance from HMC community
 - Concepts, tools, trends, best practices, lessons learned...
- **Adopt NeXus** standard from PaN experimental community
 - Use existing base classes, possibly define new ones
 - Propose application definition
- **Extend openPMD** standard and API for arbitrary hierarchies
 - Currently established for simulations in LPA community
 - Fileformat-agnostic
- **Start** the development of a **glossary**
 - Uncharted territory in LPA experiments
 - Community must be involved

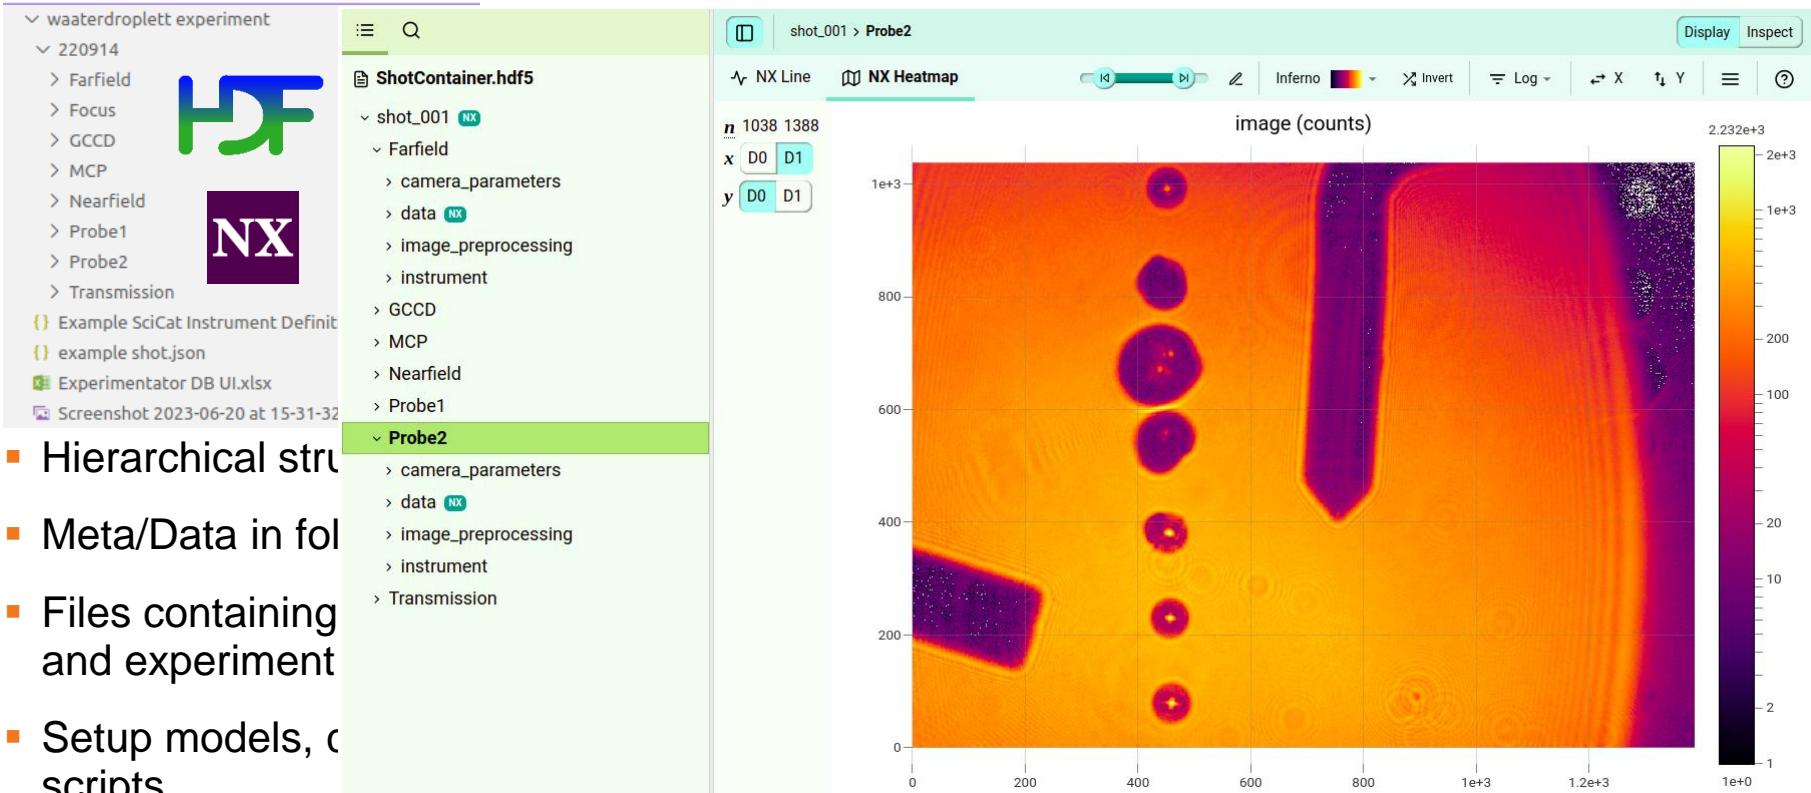

„an umbrella over a family of standards, currently for experiment data in the Photon and Neutron science community“

HELPMI: NeXus adoption

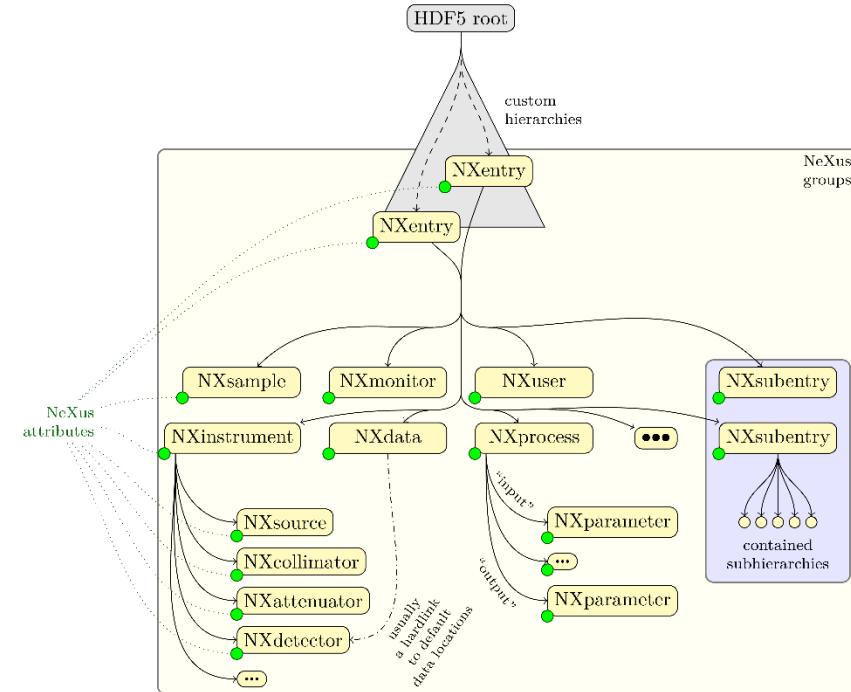

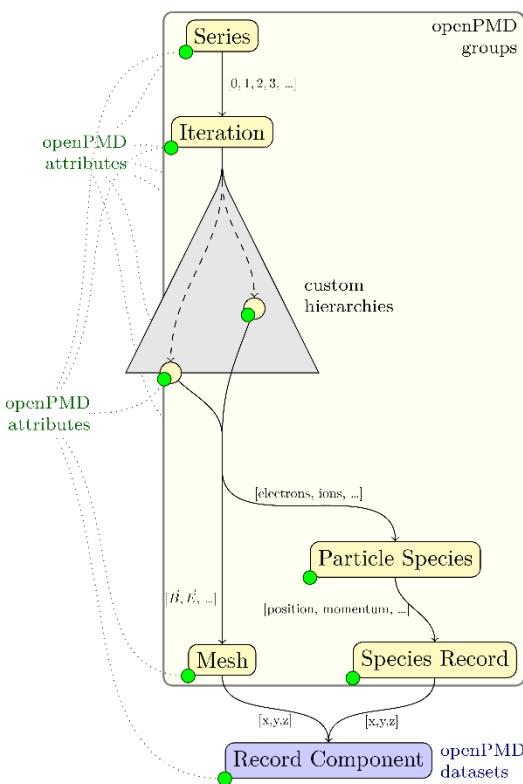

NXdata is awesome feature, scientific classes strongly bound to PaN

The screenshot displays the NXdata interface, which integrates the HDF5 and NeXus file formats. On the left, a tree view shows the hierarchical structure of the experiment data, including sub-folders for Farfield, Probe1, Probe2, and Transmission, along with camera parameters and data processing steps. The central part of the interface shows a heatmap titled "image (counts)" with axes labeled "x" and "y". The heatmap displays a series of bright spots against a dark background, with a color scale ranging from 1 to 2.232e+3. The top right of the interface includes various controls for displaying and inspecting the data.

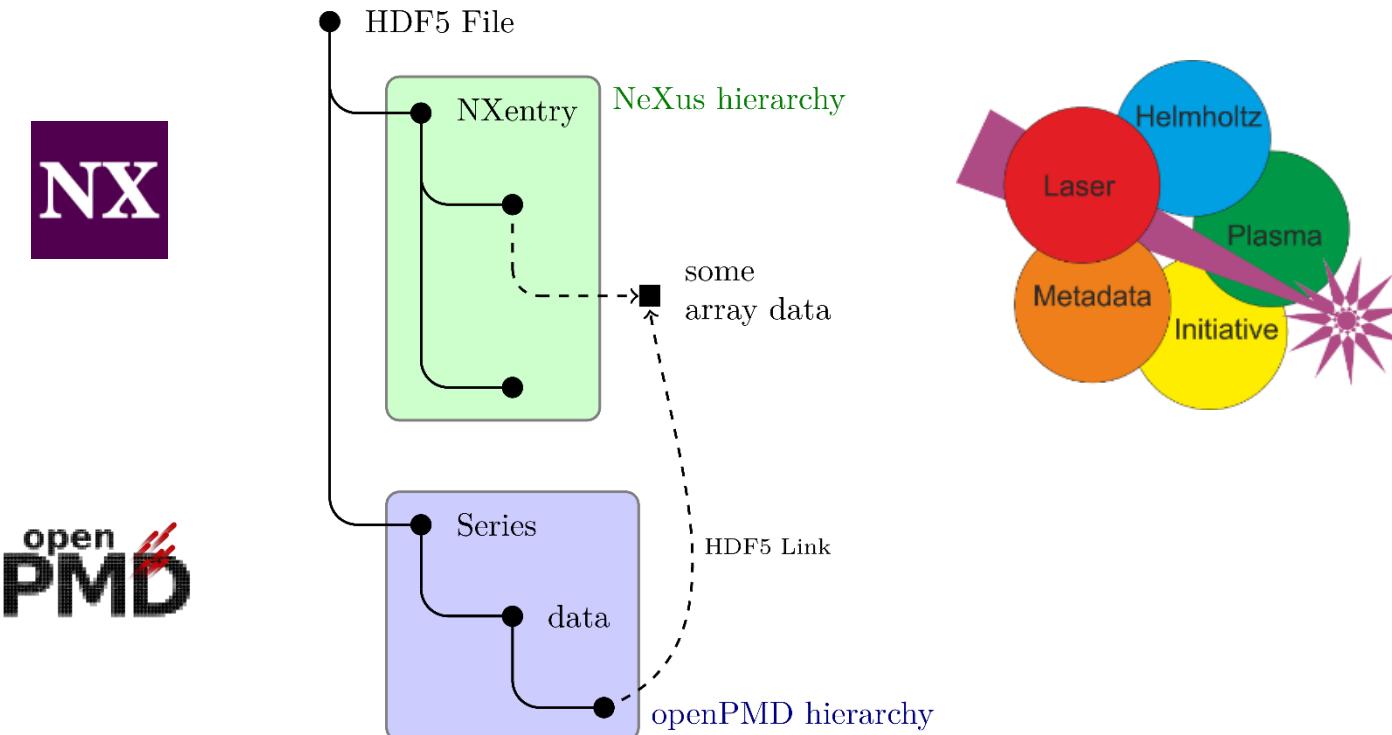

- Hierarchical structure
- Meta/Data in folder
- Files containing experiment
- Setup models, control scripts

Extend for any custom hierarchy

HELPMI: F.A.I.R. container for LPA data

Bi-lingual hdf5 file

HELPMI: draft glossary

Devices-Detectors-Components-Library: <https://doi.org/10.5281/zenodo.11143947>

HELPMI Common Phrases/Categories

1. Technical Metadata
 - a. Manufacturer or in-house design
 - b. Model name/number
 - c. Serial number
 - d. Operating software and version number, dependencies (Win, Linux?, .NET?)
 - e. Calibration data (Manufacturer)
 - f. Last calibration date
 - g. Pixel count in horizontal direction
 - h. Pixel count in vertical direction
 - i. Pixel size and/or pitch
 - j. Noise measurement
 - k. Technical drawing/file of device/setup
2. Procedural Metadata
 - a. Name of detector/device as used in experiment
 - b. Location of detector/device as used in experiment
 - c. Schematic of detector's/device's setup
 - d. Schematic of imaging/focusing setup
 - i. Lens, objectives, filters, etc.
 - ii. Imaging distances
 - e. Custom calibration, Point Spread Function (PSF), Flatfield, Gainmap (links to data)
 - f. Exposure, Shutter mode (rolling/global)
 - g. Gain
 - h. Binning
 - i. Trigger and Timing (Delay)
3. Security/Access Metadata
4. Data
 - a. Input/output energy
 - b. Input/output polarization
 - c. Input/output FWHM beam diameter
 - d. Input/output spectrum
 - e. Input/output spectral FWHM
 - f. Input/output central wavelength
 - g. 2D array of pixel values

Lessons learned

- Adoption of more specific NeXus classes is not easy: 1) Understand original use case. 2) Conceive your use case. 3) Map to each other.
- How to conceive new NeXus classes, ideally suitable for several communities? Support from NIAC?
- How to include/motivate volunteers from a community? Which basis to choose?
- F.A.I.R. data needs data and metadata catalogues.
- Proper website for community!
 - laser-plasma-metadata.org
- Workshops!
 - indico.gsi.de/e/helpmi-workshop-2024

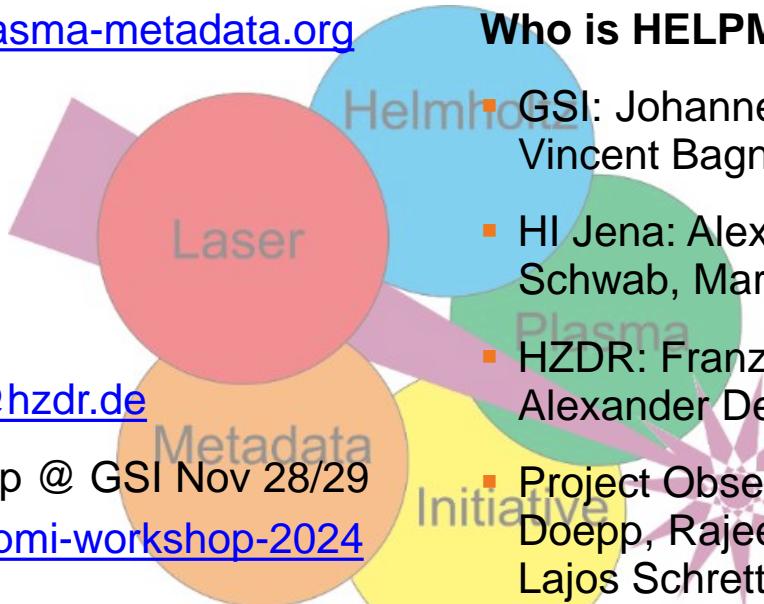

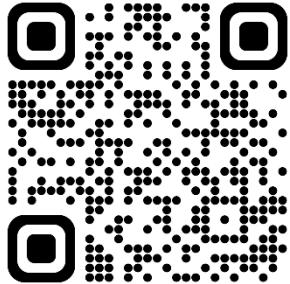

-
- [openPMD](#): open Particle Mesh Data, open standard for PIC (and more)
 - [NeXus](#): system of standards from synchrotron and neutron facilities
 - [LASY.org](#): package for (standardized) laser pulse modelling in PIC simulations, can take measured data and uses openPMD format → add HELPMI terms
 - plasma-MDS: simple schema, partly applicable to LPA, but completely new applications
 - NEILS (network of extremely intense laser systems)
 - ELI (European research infrastructure)
 - THRILL (EU project on high-repetition rate lasers)
