

Guidelines in the use of Generative AI in Research

Tuesday 15 October 2024 09:50 (25 minutes)

The guidelines focus on the responsible use of artificial intelligence (AI) in research, and has been developed in collaboration with the countries and stakeholders in the European Research Area Forum.

These guidelines emphasize the importance of ethical considerations, transparency, and accountability in the use of generative AI in research activities. They flag challenges and provide simple recommendations for ensuring that generative AI tools are used in ways that uphold scientific integrity, safeguard privacy, and promote public trust.

The guidelines provide recommendations for researchers, research organisations and funders to foster an environment where AI can contribute positively to scientific progress while mitigating risks associated with bias, misuse, and ethical concerns.

The guidelines are designed to fit and align with the broader EU framework on AI, ensuring that Europe remains at the forefront of responsible AI innovation in science.
