

Helmholtz's recommendations for the use of AI in research and administration

Tuesday 15 October 2024 10:15 (10 minutes)

In summer 2024, a committee from across the Helmholtz association has developed recommendations for the use of AI in Helmholtz. This document is intended to provide guidance to users of AI in research and administration. Its main intent is to highlight opportunities and point out risks inherent to the use of AI tools. The current version is the first instance of a “living document”, to be continuously updated to cater to developments in the field. As Germany's largest research organization, Helmholtz has the ambition to lead the way in the application of AI services for research and administration.

Presenter: SCHMUKER, Michael (Helmholtz Association)
