ORCID: Enhancing Research Interoperability through PIDs

Monday 11 November 2024 10:00 (10 minutes)

This presentation will provide a brief overview of ORCID, as standard Persistent Identifier (PID) for people, explaining what it is, how it works, and its role in the research ecosystem. We will emphasize the importance of interoperability and how ORCID contributes to it by connecting researchers with other PIDs for research outputs, funding and research organizations, or even other PIDs for people. Through ORCID's API active integrations, a network of trusted assertions is created, enhancing data reliability and collaboration across the research landscape. The session will also include a quick demo of an ORCID integration, showcasing its practical application for researchers and institutions.

Presenter: ALSINA, Francisco (ORCID)

Session Classification: PID Provider
