

## Test dataset

*Wednesday 23 April 2025 14:00 (15 minutes)*

We may benefit from having minimal yet complete datasets for different use cases. The aim of the breakout session would be to open a discussion on a centralized set of test data, that are **not** based on the developed schemas, but stem from actual laboratory work and will be used to capture any obvious shortcomings as we develop NFDI4Immuno.

The breakout session could address the questions:

- What are the most likely use cases?
- What is complete?
- Where would the data come from?
- How do deal with human data?
