What defines an academic event, and why are PIDs essential for it? (EN)

Wednesday 7 May 2025 10:05 (15 minutes)

This presentation defines the concept of an academic event and explores the development of PIDs for such events, addressing key challenges and requirements from various stakeholders. It focuses on ConflDent, a metadata registry service designed to fill the gap in research information infrastructure by providing a DOI and standardized metadata aligning with ConflDent metadata schema and schema.org for academic events. While PIDs for publications, researchers, or organizations are well-established, academic events lack similar structured identification.

Presenter: HAGEMANN-WILHOLT, Stephanie (TIB)
