

From preparation to the first deep drilling season of the 3rd Dome Fuji project, an oldest ice-core challenge

Tuesday 16 September 2025 15:45 (20 minutes)

The third Dome Fuji Ice Core Project has been ongoing. The drilling using the deep drill started in the latest field season (Nov. 2024 - Jan. 2025) and reached the depth of 541 m, at the drill site called "Dome Fuji II Camp" (5-km SSW from the old Dome Fuji station).

In this presentation, we will report and summarize our activities from the preparation (including site selection) to the first drilling season, mainly focusing on the field operations and logistics.

Primary author: KAWAMURA, Kenji (National Institute of Polar Research)

Co-authors: 3RD DOME FUJI ICE CORE PROJECT COMMITTEE; DOME FUJI FIELD TEAMS

Presenter: KAWAMURA, Kenji (National Institute of Polar Research)

Session Classification: Oral sessions

Track Classification: Mechanical Ice drilling
