

# Julich-Brain GapMaps parcellation based on structural connectivity using Constellation

C. Langlet<sup>1</sup>, D. Rivière<sup>1</sup>, S. Bludau<sup>2</sup>, T. Dickscheid<sup>2</sup>, K. Amunts<sup>2,3</sup>, J.-F. Mangin<sup>1</sup>

<sup>1</sup>Université Paris-Saclay, CEA, CNRS, NeuroSpin, Baobab, Saclay, France <sup>2</sup>Institute of Neuroscience and Medecine (INM-1), Research Centre Jülich, Jülich, Germany <sup>3</sup>Cecile und Oskar Vogt Institut für Hirnforschung, Heinrich-Heine Universität Düsseldorf, Germany

#### Context

- → **Release of the Julich-Brain**<sup>[1]</sup> as a 3D probabilistic cytoarchitectonic atlas in continuous evolution
- → GapMaps are difficult regions to map from the architectonics point of view that were regrouped under the same labels to provide a wholebrain consistent parcellation
- → Contribution to the mapping effort with **Constellation**<sup>[2]</sup>, using **structural connectivity** to provide coherent regions of relevant size.

### Materials

- → Group of 200 subjects from HCP
- → FSL tractographies
- → Freesurfer white meshes
- → BrainVisa environment
- → **Julich-Brain** version 2.9 projected on the surface<sup>[3]</sup>

FreeSurfer

### Constellation

For each region of a base atlas:

- → Compute the connectivity matrices of the group
- → Determine the **main connectivity basins** using a watershed algorithm
- → Generate from **2 to 12 candidate-clusters** according to the reduced connectivity profile
- → Select the number of clusters according to a **criterion**

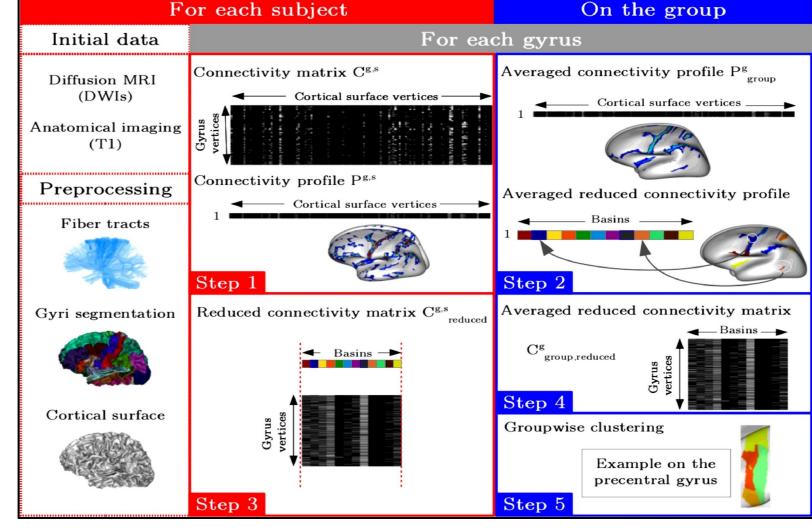

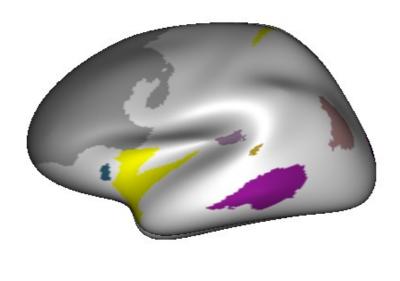

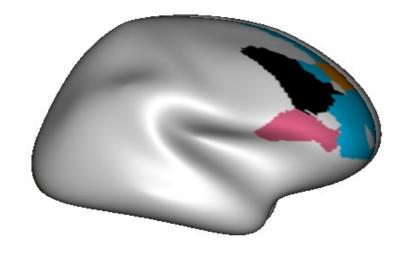

Figure 1: Constellation algorithm

### **Connectivity basins**

→ Represents the basin regions to which the region of interest is mainly connected

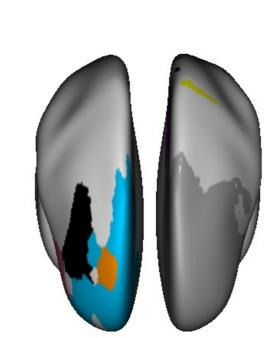

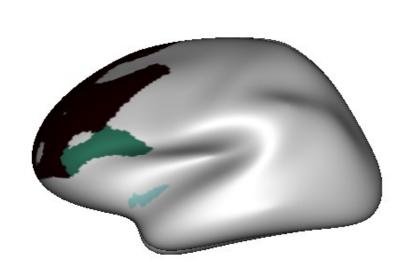

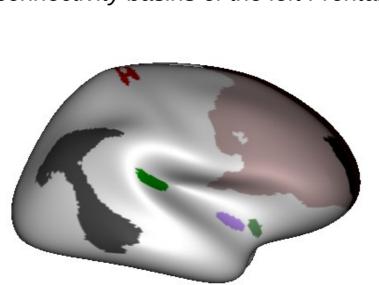

Figure 2-A: Reduced connectivity basins of the left Frontal-I GapMap

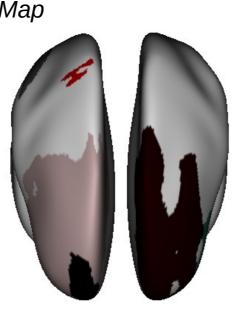

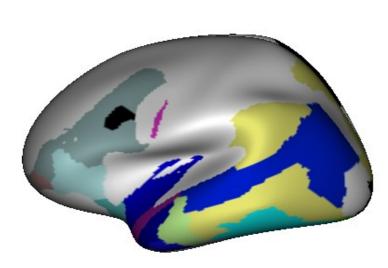

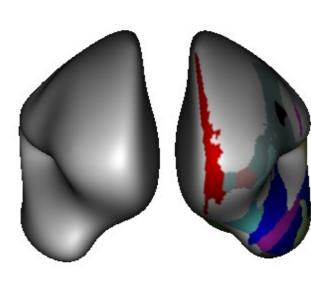

Figure 2-B: Reduced connectivity basins of the right Frontal-I GapMap

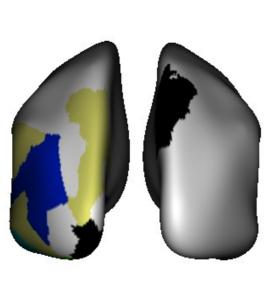

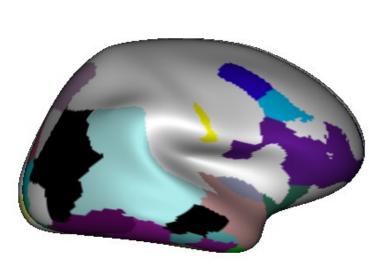

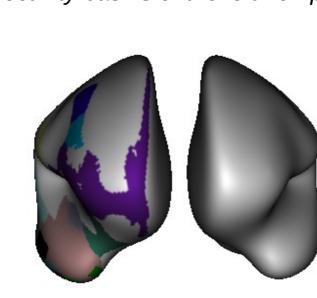

Figure 2-C: Reduced connectivity basins of the left Temporal-to-Parietal GapMap

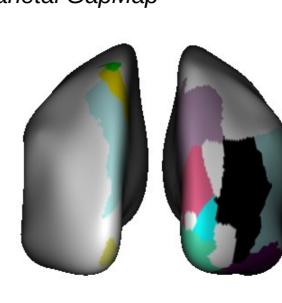

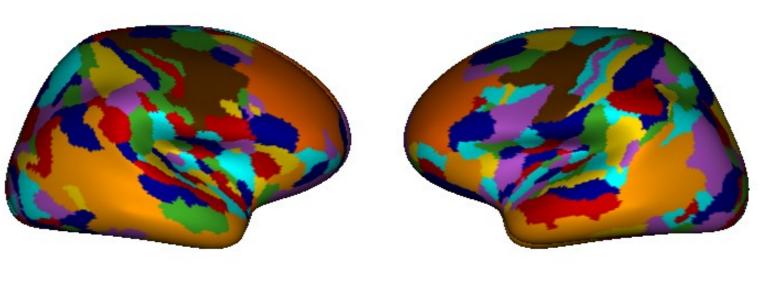

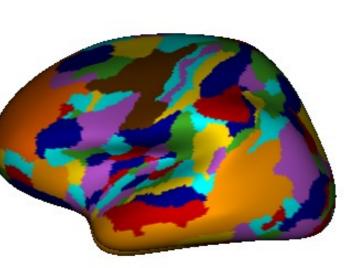

Figure 2-D: Reduced connectivity basins of the right Temporal-to-Parietal GapMap

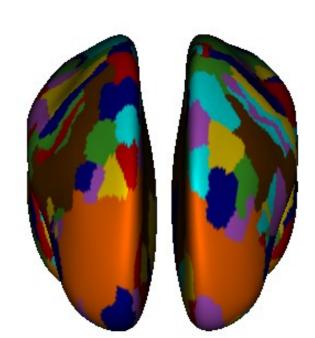

Figure 2: Reduced connectivity basins of two GapMaps

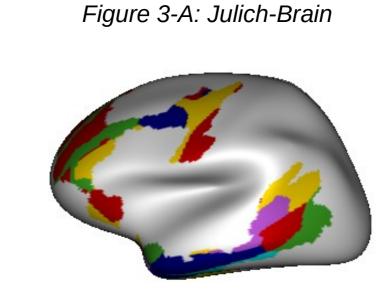

## Parcellations of GapMaps

- $\rightarrow$  Criterion: two times the mean area of Julich-Brain areas i.e. 300mm<sup>2</sup>
- → Parcellations will be available on EBRAINS knowledge graph

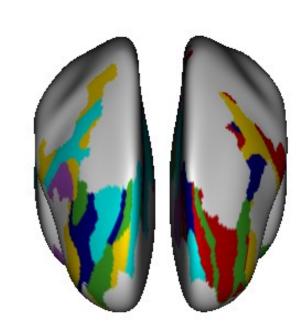

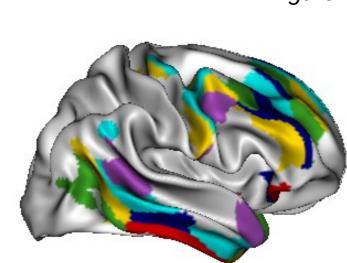

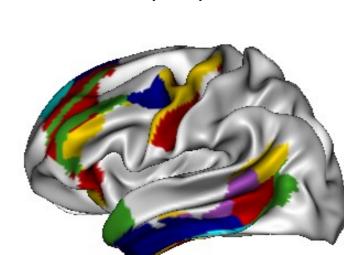

Figure 3-B: Parcellated GapMaps on inflated average brain

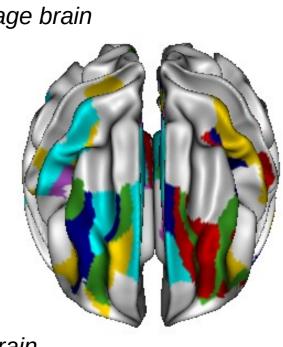

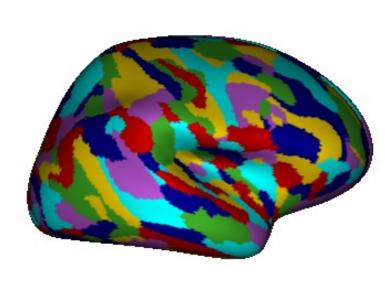

Figure 3-C: Parcellated GapMaps on average brain

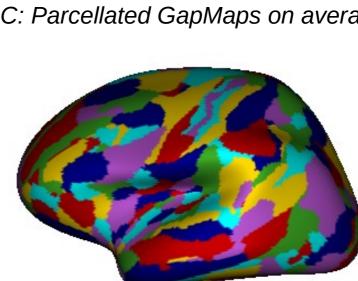

Figure 3-D: Parcellated GapMaps integrated into Julich-Brain

Figure 3: Parcellations of GapMaps and integration into Julich-Brain shown using an application of the four-colors theorem

# Discussion and perspectives

- → Criterion is difficult to assess: links with the Julich-Brain divisions can improve the results
- → **Hybrid approach** that can provide some **guidelines** for the cytoarchitectonics parcellation
- $\rightarrow$  Can be **projected** onto individual subjects to obtain **individual matrices and parcellations**<sup>[4]</sup>
- $\rightarrow$  Will be used to **provide connectivity matrices** to simulations of the brain dynamics using parcels of homogeneous areas<sup>[5]</sup>
