

# Fundamental: Introduction to Python

*Monday 12 September 2022 10:00 (7h 30m)*

**Note:** Due to huge demand we will offer this event also on 6., 9. and 12. September. Please choose the date that best suits you when registering.

In this workshop, participants will learn how to work with the Python programming language. We will introduce the basic building blocks needed to “make the computer do stuff” and lay a solid basis for future self-guided learning or more advanced courses.

No prior knowledge in programming is required. We do recommend Thonny (<https://thonny.org/>) as a good starter tool, but you are free to bring your own setup.

We will include a break of 30 minutes after around 90 minutes of workshop and a lunch break of 60 minutes.

→ **Register here** ←

## Previous experience

## Target audience

People who have never programed before or want to switch to the Python language

## Maximum number of participants

20

## Learning target

Acquire a fundamental understanding how to write programs in Python and have a basis for future learning
