

The Helmholtz Open Science Office

The mission of the Helmholtz Open Science Office is to promote the cultural change towards open science.

The office, established by the Helmholtz Association in 2005, sees itself as a service provider that supports the community in shaping the cultural change towards open science.

The Helmholtz Open Science Office is a partner of all stakeholders involved in this process within Helmholtz.

Networking

The Open Science Office is closely networked with partner organizations & other Open Science-related initiatives at the national, European & global levels.

Open Access

For open access, one of the Open Science Office's key endeavours is the promotion of the transformation from subscription-based access to open access.

Open Research Software

Since 2016, the Task Group Research Software of the Open Science Working Group in Helmholtz has been dedicated to the accessibility & re-use of research software in the context of open science.

Dialogue

- Internal mailing list "Helmholtz Open Science Professionals" for Helmholtz members
- Helmholtz Open Science Online Seminars
- Helmholtz Open Science Fora
- Helmholtz Open Science Newsletter

Open Research Data

In the area of open research data, the Helmholtz Open Science Office supports

- the Helmholtz Centers in developing policies & implementing corresponding practices for handling digital research data.
- the discussion on the re-use & thus also reproducibility of research data in Helmholtz & the interdisciplinary exchange in this field.
- the activities in the National Research Data Infrastructure (NFDI), the European Open Science Cloud (EOSC), the international Research Data Alliance (RDA) & in Research Data Alliance Germany (RDA-DE).

Moreover, we are active in third-party funded projects such as re3data COREF & ORCID DE.
