Stelle Sulla Terra: The advantages of making science accessible

Monday 16 September 2024 18:13 (1 minute)

Nuclear astrophysics is a field of research that lends itself to an engaging dissemination thanks to its interdisciplinary nature. It is important to involve blind or deaf individuals in these moments of dissemination to an even greater extent. The project 'Stelle sulla Terra' at the University of Padua aims to achieve this by reproducing a scaled model of the 'Bellotti' IBF facility and creating other tactile materials and videos using sign language."
