

FACS-based HT-screening of microbial production strains using biosensors

Thursday 7 December 2023 15:45 (20 minutes)

Introduction to the concept of transcription factor-based biosensors for the semi-quantitative detection of biotechnologically interesting compounds in single cells. In combination with fluorescence-activated cell sorting (FACS), these biosensors represent powerful molecular tools for high-throughput screening campaigns.

Presenters: Ms BRÜCKER, Daniela; Prof. MARIENHAGEN, Jan (Forschungszentrum Jülich (IBG-1)); Mrs KRINKE, Melanie (Forschungszentrum Jülich (IBG-1))

Session Classification: Lab/ Field tours
