

SaxFDM-DMP: Developing a Data Management Plan Service for Research Institutions in Saxony

Tuesday 13 June 2023 10:30 (25 minutes)

Data Management Plans (DMPs) are crucial for a structured research data management and often a mandatory part of research proposals. By using tools, DMPs can be effectively developed and managed. Our aim is to develop a quick and easy to use DMP service for members of Saxon research institutions. In order to evaluate 18 of the existing tools, we defined 31 requirement parameters covering aspects with regard to basic functions, technical aspects and user-friendliness. The highest total evaluation scores were reached by Data Stewardship Wizard, DMPTool and RDMO NFDI4Ing. In a next step, we will check the feasibility of adapting each of the three tools according to our needs and estimate the respective workload. The most suitable DMP tool will then be customized for our requirements.
