

AI assistants in Education: Rocket or Ruin? Lets discuss!

Thursday 7 December 2023 10:00 (1h 30m)

There has been a notable surge in the utilization of AI assistants like ChatGPT, Bing Chat, and GitHub Copilot. This increase pushes both educators and institutions to ponder: How should we adapt our courses in response to these AI-driven tools? To delve deeper into this query, we executed a focused experiment within the “Introduction to Machine Learning” course, promoting the use of these AI assistants. At the beginning of the course students were invited to use these tools. With surveys conducted pre and post-course, we’ve gained insights into the students’ experiences, as well as the mentors impression with these novel tools. Join us in this interactive workshop, where we’ll not only unveil our findings but also invite you to share your experiences, thoughts, and opinions, shaping a constructive discourse on the future of AI in education.
