

# Enriching EarthServer With AI-Enabled Datacubes - Demo

*Thursday 4 April 2024 17:00 (1 minute)*

EarthServer is a global federation of research institutions and commercial providers offering location-transparent datacube access, extraction, aggregation, analytics, and fusion. AWI is member in EarthServer since several years now.

In our live demos we will present the EarthServer principle of a single global datacube space. Further, we will present recent technical progress on AI integration, and further new features. At the same time, based on our active standardization work in OGC and ISO we link into current standardization trends and showcase OGC work on OAPI-Coverages, GeoDataCubes, and other relevant activities.
