House of Computing and Data Science

Tuesday, March 5, 2024 4:30 PM (20 minutes)

As a central institution of the University of Hamburg, the House of Computing and Data Science (HCDS) supports interdisciplinary research and application of innovative digital methods in close cooperation with its partners from science and research in the Hamburg metropolitan region.

It coordinates and supports the implementation of the digital strategy in research at the University of Hamburg. It fuels the easy adoption, usage, and research of digital methods in its Methodology Competence Center and offers various disciplines and projects a forum for the exchange of information and collaboration at the interface between methodological sciences and applied sciences in the Cross-Disciplinary Labs (CDLs).

In Cross-Disciplinary Labs, interdisciplinarity takes place at eye level: here, research questions are addressed that are of interest to both methodological science and its application in research in science and the humanities.
